DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Species I, claim 1, in the reply filed on 8/25/05 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Kishimoto et al. (US 6552421).

Regarding claim 1, Kishimoto discloses a semiconductor device comprising:

A substrate (3, Fig. 11a) having a main surface including a first area (defined by 15, Figs. 11a-b), a second area (defined by 16, Figs. 11a-b) surrounding the first area, and a third area (defined by 2, Fig. 11a) surrounding the second area;

A first insulating protective film (15, Figs. 11a-b) that is provided in the first area and formed in a shape having no angles (Fig. 11b, Col. 13, lines: 10-20 disclose that 15

Application/Control Number: 10/766,938

Art Unit: 2891

is a highly thermal conductive adhesive. Such adhesives are known to be electrically conductive or electrically insulative. Kishimoto explicitly discloses that the whole adhesive may be an insulative one (Col. 12, lines: 25-33));

A second insulating protective film (2, Fig. 11a) provided in the third area (defined by 2, Fig. 11a);

A semiconductor chip (7, Fig. 11a) that is provided on the first insulating protective film (15, Fig. 11a-b) and has a bottom surface facing to the first insulating protective film; and

A sealing resin (2, Fig. 11a) covering the semiconductor chip (7, Fig. 11a), wherein the bottom surface of the semiconductor chip (7, Fig. 11a) covers the first area (defined by 15, Fig. 11a-b).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas M. Menz whose telephone number is 571-272-1877. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bill Baumeister can be reached on 571-272-1722. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
